

METALLIC EPOXY COATINGS - POWDER

We are pleased to introduce new metallic additives to our product offering. These high-quality pigments were initially used in the automotive industry, but we have found them to work extremely well in ECTR Clear Epoxy. Unlike other powder metallic pigments, these products are extremely easy to disperse into epoxy and create extraordinary results. We encourage you to try these new metallic additives to create one-of-a-kind floor finishes that are limited only by your imagination.

Advantages

- Unique appearances and patterns
- Impermeable, easy to clean surface
- Seamless and joint free
- Low odour during application

Areas of Use

- Commercial
- Residential
- Retail Stores
- Showrooms

COLOUR SHIFTS

These metallic additives will give your project a mesmerizing finish. When incorporated into CTM ECTR Epoxy, ever-changing effects are created that appear to change as you move on the finished surface.
